

Story of the month

Project

Project name:

CO₂ heat exchangers for a supermarket chain

Location:

Denmark

Description

A Danish supermarket chain had a desire to change the refrigerant in their cooling systems to CO₂ across their stores. To facilitate this transition, they reached out to a ventilation company experienced in such projects. The ventilation company, which is familiar with EVAPCO Denmark's expertise from previous collaborations, turned to us for support.

EVAPCO Denmark designed a tailored solution that seamlessly replaced the existing systems. In collaboration with the customer, we developed a system that met all thermal and quality requirements. Known for our high-quality products and excellent customer service, we successfully delivered a solution that has resulted in significant benefits for the 49 supermarkets across Denmark.

Features

- K65 headers
- Tailored coils to an existing system
- High pressure tested
- Material traceability

Benefits

- Enhanced refrigeration performance
- Reduced environmental impact
- Natural refrigerant CO₂
- A greener company profile
- Longterm sustainability
