

Story of the month

Project

Project name:

Drainable adiabatic cooler

Location:

Southern Europe

Description

A fully drainable adiabtic drycooler has been produced in cooperation with our agent from France, Mr. Nicolas Junon, Fluid Air Solutions for a major customer.

For this case both space and energy optimization has been paramount and has been considered from the outset.

In addition, environmental considerations have also been taken into account from the outset, as the medium in the cooler itself is pure water without additives.

Features

- Space efficient design
- Pre-programmed PLC system
- Fully drainable design
- Integrated safety railing

Benefits

- Easy to maintain
- Fully automated system
- Tailored to user needs
- Energy and water efficient
